

SPFX Software ® presents:

SPFX-DA Disk Analyst

- ☞ **Disk Analyst (D/A) will collect information about disk usage on one or many of your systems.**
- ☞ **On-line inquiries allow you to see disk usage by size using "drill-down" screens.**
- ☞ **These screens allow direct access and maintenance to system objects like comparisons, re-grouping, and modification of the things taking up your disk space.**
- ☞ **The reports generated show disk usage in critical areas at the same time indicating the percentage of disk space available each represents.**
- ☞ **Once the Set-up is done, the system runs relatively hands-free.**
- ☞ **The Disk Monitor is included and can be turned ON or OFF to monitor disk storage status elements in the background and notify up to three people immediately of any concerns.**
- ☞ **The thresholds can be individually set for each of the conditions that the monitor checks.**
- ☞ **You can then respond to changes on the system before it becomes a "fire" that has to be put out immediately.**

Features:

- **Runs mostly in the background, self-purging, and has very easy set-up**
- **User-friendly interface to Job Schedule entries**
- **Total field-sensitive, field-level on-line help and search index**
- **Very intuitive SAA-compliant look and feel**
- **Handles 15-digit (bytes) object sizes**
- **Two-level user-defined grouping by object and/or owner/creator**
- **Drill-down inquiry screens by absolute size/name that allow object handling**
- **Reports on exceptions like locks, damages, largest and oldest objects, spooled files by age summary/detail, inactive objects, deleted records, DLO summary, etc.**
- **Monitor that checks for system exceptions like disk protection drops, space used threshold/increment, arm busy/temp address threshold, etc.**
- **Totally customizable with a very fast data collection**
