

SPFX Software ® presents:

SPFX-PA Performance Analyst

- ☞ **Performance Analyst (P/A) will identify over 12 key elements of system performance on one or many of your systems.**
- ☞ **Summary reports also show system configurations for history and comparisons.**
- ☞ **The reports generated are graphical and show systems a month at a time with Average, Peak, and Guideline values.**
- ☞ **Data can be collected at any number of remote sites and analyzed on a single central machine.**
- ☞ **Once the Set-up is done, the system runs relatively hands-free.**
- ☞ **The Summary data can also be automatically transmitted to a PC to be graphed using MS Excel 97 Macros (supplied).**
- ☞ **Any resource "in trouble" is identified without having to be a performance guru.**

Features:

- **Runs mostly in the background, self-purging, and has very easy set-up**
- **User-friendly interface to Job Schedule entries**
- **Total field-sensitive, field-level on-line help and search index**
- **Very intuitive SAA-compliant look and feel**
- **Summarizes by date for Average, Peak, and Guideline**
- **DDM feature allows collection on many, analysis by one machine**
- **Generates monthly system summary and Gantt graphs by element**
- **Also generates ASCII comma-delimited data in shared folders for spreadsheet / database import on attached PCs**
- **Uses IBM's Performance Tools/400 and table-driven guideline/scaling factors**
- **Totally customizable with a fast performance summarizing function**

Elements tracked:

- **Transactions per Hour**
- **Response Time (Internal)**
- **Local Workstation Response Time**
- **Remote Workstation Response Time**
- **CPU Utilization (Int. & Sys.)**
- **Disk Ops/Second/GB (NOT Disk I/O's/Second - old measure)**
- **Disk Percent Full**
- **Line Utilization**
- **Memory Faults per Second (each pool & Total)**
- **and others...**
